

## Safety Measures to be Taken While Filling in the Online Forms

All internet users somehow or the other have used online shopping facilities. Its a complete and different experience than shopping in a typical regular shop. There are certain things that an online shopper must be aware of for maintaining safety and use this medium effectively.

These ecommerce websites consists of online forms which are to be filled in by the visitors. We all know that these forms are very important piece of information through which websites procure user's information. However a good ecommerce site has details of what they do with this piece of information in the privacy statement.

These online forms are rectangular boxes that have different labels asking for information such as your first name, last name, profession, credit card details, email address, etc. Here visitors type in the asked information in the online form and filling it click on the submit button.

Web forms can be found in various formats and varieties asking for most initial question like names, email address, contact information to filling in the application form for higher services. These higher services may include opening up any account with an organization, bill payment, etc. When your online shopping involves use of credit card, users require to know basic precautionary things.

Observe the URL in the address bar. Whenever we land at any website it's URL would be like 'http'. A web form page where credit card information has to be entered has the URL as 'https'. Thus whenever you are on web form page observe the URL.

Another thing that has to be looked for is the icon of a lock that is located on the browser window at the bottom of the web form. When you click or double click on this icon it would land you at the page having security information. It shows that the online form page is secure and the information that users type in the box are secure.

There are certain ecommerce websites that use the way of deception for gathering users' information, like an offer of a free sample of a product with hidden terms and conditions. Therefore it is necessary to read sentences near the check boxes.

In order to avoid any misuse of the credit card information, see to it that the ecommerce website has all necessary security features. This would lead to tension-free online shopping and better shopping experience of the products/services.
